CamToPlan PRO

About CamToPlan PRO
With the app CamToPlan PRO you can quickly and easily measure distances and areas. The app is ideal for planning floor plans.

CamToPlan PRO is a very helpful app that lets you create floorplans in no time. The app uses augmented reality to measure distances and areas. Once the app has created the layout of a room, CamToPlan PRO automatically calculates the area of the room. The floor plan is also extended with all measurements. You can export the generated floor plan as PDF or PNG and send it to friends or acquaintances via e-mail or social networks.

CamToPlan PRO - Features:

- Measure distances and areas: CamToPlan PRO is an innovative app that allows you to measure distances and areas in no time at all. The special highlight: Since the app works with augmented reality, you do not need a folding rule or any other tool to measure it. Using the unique AR technology, you can easily determine the length of walls with your smartphone or tablet or measure a piece of furniture. Just point the camera of your smartphone or tablet at the area you want to measure and within seconds you will get the measurements.

- Create floor plans: With CamToPlan PRO you can easily create floor plans. For this you just have to measure the walls of the room. The app automatically merges the measured walls and then creates a floor plan of the room. When the floor plan is finished, the app also automatically calculates the area of the room. In addition, the app provides the floor plan with all dimensions.

- Also measures behind furniture: The app can measure walls and distances even if the object to be measured is hidden behind furniture. CamToPlan PRO automatically determines the intersection between the floor and the target to be measured. While the app measures, you can also move around easily. This does not distort the result. If you get closer to your target, it will provide even more accurate results.

- Pay attention to good conditions: Of course, the accuracy of the measurement depends on many factors. In order that the result is as accurate as possible, the object or surface should be well illuminated. In addition, the room should at best have a non-reflective floor.

Conclusion: CamToPlan PRO makes it easier to measure rooms and objects. Thanks to the innovative augmented reality technology, the cumbersome measurement with the help of the yardstick is a thing of the past.
