

2048 Bricks

****About 2048 Bricks****

2048 Bricks is a new high score game which was created by the popular game developer Ketchapp. The game is a combination of the famous mobile game 2048 and the gaming classic Tetris. Players have to combine number blocks to achieve the highest possible score.

As in 2048, 2048 Bricks is about combining number blocks to achieve the highest possible score. As soon as a tile hits a block with an equal number, they merge and give the next higher number. If, for example, two 2- blocks meet, a new 4-block is created. In contrast to the popular mobile game 2048, the number blocks fall from the top of the field, as in the classic game Tetris. With a swipe you have to direct the tiles on one of the five lanes. The round is over as soon as the field is full and no further tiles can follow from above.

****2048 Bricks - Features:****

- Combining 2048 and Tetris: 2048 Bricks combines the gameplay of 2048 and Tetris to create a novel and exciting high score game. As in 2048, your goal is to achieve the number 2048 by combining tiles. If you've done that, you can also try to score as high as possible and set a new high score. In contrast to the popular mobile game 2048, the tiles do not appear anywhere on the field, but fall down in Tetris manner from the top of the field. Now it is your job to direct the tiles by swiping on one of the five lanes. If the number block then hits another number block with the same number, the two blocks merge to the next higher number. For example, if you combine two blocks of 2, a new block of 4 is created. The game round is over as soon as the field is full and no new tiles can fall from above.
- Also combinations of 3: In 2048 Bricks not only combinations of two, but also of three blocks are possible. If you combine three blocks with the same number, one number is skipped directly. For example, the combination of three 16-tiles creates a 64-tile.
- New skins for your blocks: At the beginning of the game you play with square tiles. If you want to use other tiles, you can use special coins and buy new skins. For example, there are also round or zigzagged tiles available. You can earn coins by, for example, watching advertisements.

Conclusion: 2048 Bricks is an innovative and entertaining high score game that combines the popular gameplay of the famous games 2048 and Tetris. This creates a novel game concept, which guarantees a lot of fun and casts a spell over the players quickly.
