About Avast VPN SecureLine Proxy
Avast VPN SecureLine Proxy is a VPN tool for smartphones and tablets, which encrypts data with the help of a special 'data tunnel' and thus makes it anonymous for third parties.

With Avast VPN SecureLine Proxy, your data is guaranteed to remain private and anonymous. If you use a Wi-Fi network, the app will create an encrypted channel that connects your device to the website. This guarantees that your data is 100% secure and anonymous. The app also allows you to connect to servers from all around the world. Because of that, you can also access content and websites that are actually blocked by a location restriction.

Avast VPN SecureLine Proxy - Features:
