

Boomerang from Instagram

****About Boomerang****

Boomerang is an app from Instagram which allows users to create short videos which move forward and backward like a boomerang.

By using Boomerang you can create short and funny videos. In order to create a boomerang video, you have to aim the camera of your smartphone or tablet at yourself or other people or objects in your surroundings. Boomerang makes a photo series consisting of ten photos which the app merges into a video. Like a boomerang, this video moves forward and backward in increased speed.

****Boomerang – how does it work?****

- Create funny boomerang videos:** Boomerang is an app from Instagram which allows you to create short videos. These videos move forward and backward in increased speed. In order to create a boomerang video, you have to aim the camera of your smartphone or tablet on yourself or a person in your surroundings. For the choice of the right motive, it is very important that the person or the object is in motion. As soon as you tap the app's button, Boomerang takes a photo series which consists of ten photos. The app merges these photos in a video afterwards.
- Share your videos:** After you created a funny video with the help of Boomerang, you can share it with your friends on Facebook and Instagram. You can also save the videos in your gallery. Like that you can either share the video later or keep it private.
- No registration needed:** In order to use Boomerang, a registration is not necessary. You also don't have to own an Instagram or Facebook account to create videos. Like that there is nothing to stop the video fun and you can start directly.

Conclusion: By using Boomerang you can create short and funny videos which move forward and backward like a boomerang. With the help of the app you cannot only create exceptional videos but also share them easily with your friends and acquaintances. Since there is no registration needed for the use of Boomerang and since the use is very easy, Boomerang is suitable for young and old.
