

Geekbench 4

****About Geekbench 4****

Geekbench 4 is a benchmark app with which you can check the performance of your smartphone or tablet. The results of the test can then be compared with the performance of other devices on the developer's website.

With Geekbench 4, you can find out more about the performance of your smartphone or tablet within minutes. The app detects the performance of single- or dual-core CPUs with just one click and shows you the results of the benchmark clear and easy to understand. On the developer's website you find many other results from similar devices, which can be compared to your test results. Since all benchmarks are stored in the app, you always have access to all tests and their results.

****Geekbench 4 - Functions:****

- Check the performance of your device: Geekbench 4 is a so-called benchmark app, with which you can check the performance of your smartphone or tablet. The app determines the performance of the so-called single or dual-core CPUs. In simpler terms, the app tests both the processor and the memory of your device. The app is characterized by a simple operation. To test the performance of your smartphone or tablet, simply start the CPU test. The rest of the work is done by the app. It automatically performs numerous tests that are completed within a few minutes. The results will then be presented in a clear and easy to understand way.
- Compare the performance: The results of the CPU tests are only meaningful compared to other devices. For this reason, the developer provides numerous comparative values on its website. Figure out how your smartphone or tablet performs compared to other devices of the same model.
- Access at any time: Since all benchmarks that Geekbench 4 has ever done are stored in the app, you can always access the results of each test and compare them.
- Upload your results in the cloud: If you upload the test results in your cloud, you can access them even from your PC. In addition, you have the opportunity to retrieve the results on other devices.

Conclusion: Geekbench 4 is one of the most popular benchmark apps worldwide. The app guarantees a quick and, above all, accurate test of your device performance and offers you the possibility to compare the performance of your device with other values from similar models.
